Dear customer,

At 2CI we always find ways to help you **make your electronic assembly faster**, which is why we're proud to offer you our **Xpress solution** for prototypes, pre-series and series.

**Base SMD Xpress** raw material is FR4, where you can centre the PCB's with the technical band we put on all the PCB's smaller than the usable SMD stencil area and with SMD. The band allows to fit the PCB into the base and, complemented with the guidelines, you get a flat finishing to put the stencil and the solder paste.

Our Xpress solution consists of the following elements:

- **SMD Stencil**, 127 $\mu$  thick and maximum usable size 170,8 x 270,8mm. Delivery with prototype or manufactured series in 2 to 6 days, upon request.
- **Base SMD Xpress**, 250 x 350mm, which is the reusable tool for all your assemblies.

Some of the **advantages** include:

1. Self-centring of circuits on the SMD stencil.
2. Wire positioner and three guidelines to help support the wire positioner, which we provide with the base.
3. Repeatability, thanks to the self-centring pins.
4. Easy to store, doesn't take up space.
5. Compatible with thickness from 0.8mm to 1.6mm.
